

NEOCEMENT® INJECT P

Injectable Calcium Phosphate Cement
 that favors bone regeneration.

Neocement® Inject P is an injectable calcium phosphate cement. **Neocement® Inject P** is presented in an injectable form. It is intended for bony voids that are no intrinsic to the stability of the bone structure. **Neocement® Inject P** is used in orthopaedic and traumatology.

SAFETY

Absence of immune infectious response or disease transmission.

QUALITY

Developed under the rigorous standards and quality control of the medical device industry. Bioceramed is an ISO 13485 certified company, and our products are CE marked.

COMPOSITION

Neocement® Inject P is presented in a syringe system with luer lock tip, enabling paste injection with a cannula.

Neocement® Inject P is a synthetic calcium phosphate cement easy to apply *in situ*. Acts as a temporary osteoconductive scaffold for bone ingrowth.

Neocement® Inject P to be used in non-load-bearing applications.

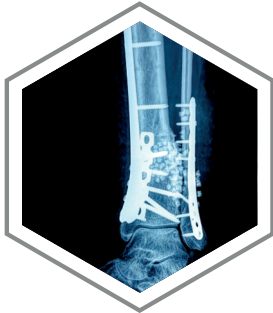

OTHER BENEFITS

Neocement® Inject P has low exothermic setting temperature, not inducing tissue necrosis.

Neocement® Inject P is radiopaque, which allow the observation of the healing process.

The use of synthetic grafts avoids the autograft procedure thus minimizing the complications and morbidities associated and reducing the surgery time.

KEY APPLICATIONS

TRAUMATOLOGY

Fractures, gaps or skeletal system defects (femur, tibia, humerus, ulna, fibula, calcaneous, hand, among others).

ORTHOPAEDICS

Non-unions

ONCOLOGY

Filling of bone curettage
